dokoni FIND

Instantly find and manage any information

The flood of data office workers have to deal with makes it increasingly difficult for them to find the information they need fast. Locating a specific file can be a time-consuming job that takes up valuable time, reduces an office worker's productivity and is bad for the bottom line of any business. To solve this problem, DEVELOP has launched dokoni FIND, a smart search software that will instantly find and manage any information in any format or any connected repository.

 **dokoni FIND**

dokoni FIND

dokoni FIND is high-performance, out-of-the-box enterprise search tool that gives you instant access to whatever you are looking for – simply by typing in a keyword in the search bar. It will quickly locate and retrieve any type of data, in any format, and from any connected repository.

No need to move data

All your data files can be left where they are. dokoni FIND will locate, extract and index any file in real time from any of your existing and connected data silos, e.g. your company's intranet, departmental records, SharePoint sites, e-mail attachments, scanned files, Notes databases, CRM records, cloud apps, etc. dokoni FIND is compatible with 300 popular file formats.

Single point of access

The tool's search engine automatically integrates all data into a Universal Index, which creates a single point of access that shows users all the information they are allowed to see. This enables the search for information to be started from inside SharePoint, any user's desktop or the available mobile app.

Automatic content conversion

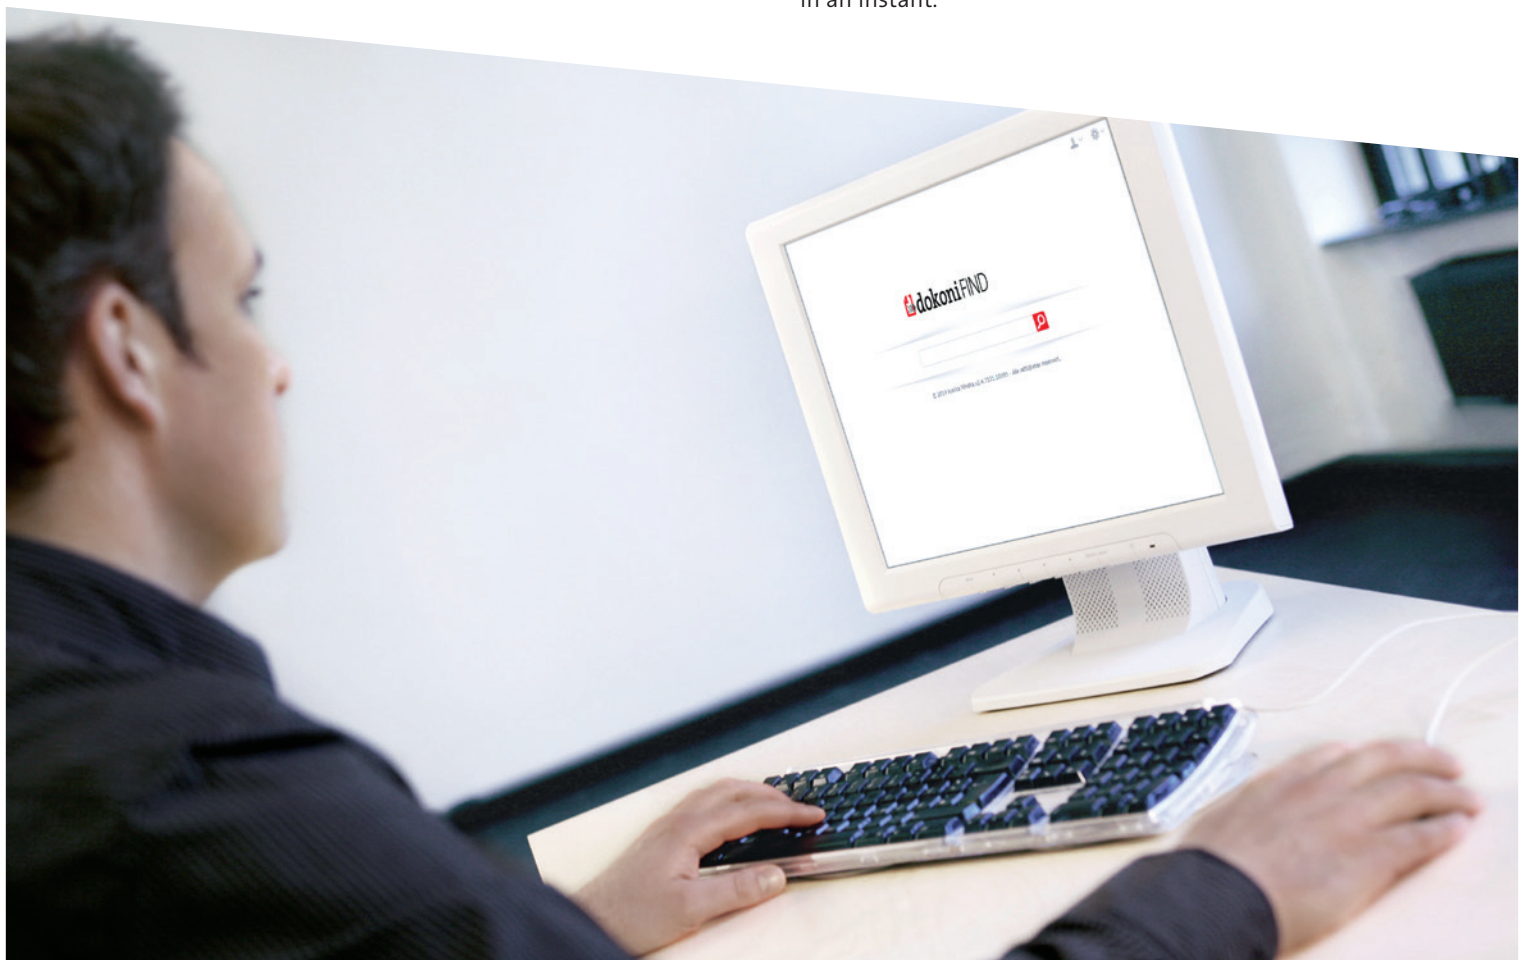

dokoni FIND is much more than a tool for merely searching for metadata and file names. Its optical character recognition (OCR) technology accurately converts texts and any other kind of content from any file, and indexes everything to make the content accessible for later searches.

Integrated security

The application complies with whatever security scheme your company has in place to ensure users can access only the content they are authorised to see. dokoni FIND comes fully integrated with support for Active Directory. So when a user's security rights change, these are automatically updated.

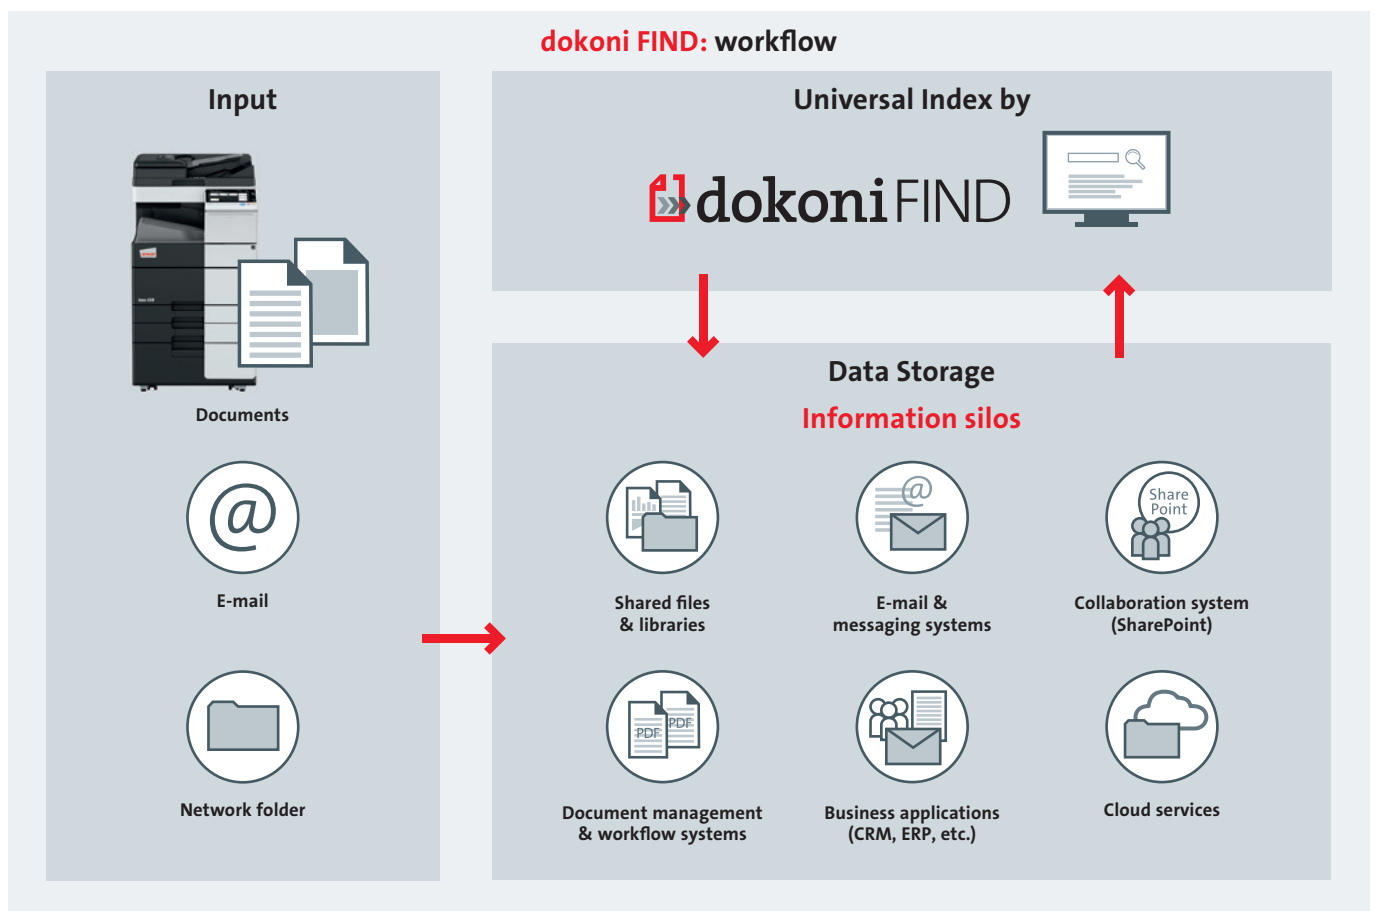

Simply up-scalable

You can easily scale up dokoni FIND. Irrespective of where any additional incoming data is stored, this search tool will find it in an instant.

Key benefits

- > **Ease of use:** Log in just once and search for what you need. Fast one-click retrieval lets you access and open documents directly from their original location without knowing their name.
- > **Total data visibility:** Powerful OCR technology lets you search deep inside each file for the content you're looking for.
- > **Works in tune with you:** No need to adopt any new methods for saving and tagging documents. Just leave the files where they are and this search tool will locate them fast.
- > **No need to migrate content:** dokoni FIND indexes everything right where it is.
- > **Only authorised access:** Users can only access content they are entitled to.

Functional overview

Document capturing

- > Content virtualisation automatically combines sites and data into a Universal Index
- > Universal data access – whatever format or repository
- > Data connectivity through integrated cross-indexers that facilitate uniting the SharePoint and desktop search with other data sources
- > Content conversion through OCR technology that accurately converts and indexes all content
- > Office 365 integration via an Outlook search bar
- > Integration into SharePoint 2013 search infrastructure via a dedicated search bar

Content management

- > Enterprise search starts from inside SharePoint, a desktop or the mobile app
- > Mobile workers can share, download or send content from any device
- > The personalised information stream offers a new level of search and data integration, including suggested related results for dedicated user and three lists for the user's favourite, most recent searches and recently accessed documents
- > Data remain in place in their original repositories
- > Integrated security to ensure nothing but authorised user access
- > Simple scale-up options for additional incoming data

dokoni FIND

SYSTEM REQUIREMENTS

Minimum hardware requirements

4 core, 64-bit CPU
16 GB free RAM
100 GB free disk space
Domain membership
Internet connection

Language support

English, Bulgarian, Czech, Danish, Dutch, Finnish, French, German, Hungarian, Italian, Norwegian, Polish, Portuguese, Romanian, Russian, Spanish, Swedish, Ukrainian

SOFTWARE REQUIREMENTS

Server Software Requirements

Windows Server 2016
Windows Server 2012
Windows Server 2008 R2 SP2
(except Foundation & Essentials edition)

Microsoft SharePoint Connector*

Microsoft Office SharePoint Server 2016
Microsoft Office SharePoint Server 2013
Microsoft Office SharePoint Server 2010
SharePoint online

Exchange Connector**

Exchange Server 2016
Exchange Server 2013
Exchange Server 2010
Exchange online

Client Software Requirements

Windows 7, 8 & 10 or iOS or Android
Adobe Acrobat reader
Microsoft Office pack or compatible suite

Client Browser Compatibility

Internet Explorer 11 and above
Chrome 30 and above
Firefox 30 and above
Safari 9, 9.1, 10 and above

Installation method

Installation using in-built database (PostgreSQL)
Installation using SQL 2012 Server

*Only mandatory if the SharePoint connector is installed.

**Only mandatory if the Exchange Connector is installed.

The support and availability of the listed specifications and functionalities varies depending on operating systems, applications and network protocols as well as network and system configurations.
